

ABSTRACT

The invention relates to a fluid moving device for use with inflatable articles. The fluid moving device includes a fluid intake port, a motor and impeller assembly, and a fluid transfer orifice that provides the fluid. The fluid moving device also includes a
5 power switch. The fluid moving device may be provided with a hand-holdable housing. The fluid moving device may also be provided with a battery compartment sized and arranged to fit a standard size set of batteries, and a removable battery container. The removable battery container may be sized and arranged to adapt differently sized batteries to the battery compartment. The power switch may also be a self-sealing power
10 switch that seals the intake port when the power switch is in a deactivated position.
